PORTABLE DVT PREVENTION DEVICE

PC-INS-007 · Rev 1.0 · Effective 08/14/2026 · Approved: A.B. Harvard · Product insert to PC-FRM-007 — provide together with the packet

Portable intermittent pneumatic compression device with leg or foot sleeves

What this equipment does

A portable DVT prevention device gently inflates and deflates sleeves on your legs or feet to keep blood moving, which lowers the risk of a deep vein thrombosis — a blood clot — while you are less mobile after surgery or injury.

How your equipment reaches you

Delivered and fitted in person by a trained Range of Motion, Inc. representative, or shipped to you by common carrier when ordered ahead of a scheduled surgery. We will tell you which applies.

How you are instructed on safe and effective use

Provided in person at fitting, or by telephone with the manufacturer's manual if shipped ahead of surgery. You will be shown how to apply the sleeves at the correct tightness, how to start the unit, the hours per day your physician ordered, how to charge the battery, and what to check on your skin. You will be asked to apply the sleeves and start a cycle yourself. Call (770) 991-4417 at any time for more help, at no charge.

Medicare requires us to document that you were instructed on the safe and effective use of this item — that is why we ask you to sign the acknowledgment page in your packet. If you ever feel you were not adequately instructed, tell us: we will re-instruct you at no charge and correct our record.

Rental or purchase

Rental for the period of medical need ordered by your physician, typically the weeks following surgery. Ask us and we will explain your specific rental terms and expected duration.

Warranty

Covered by the manufacturer's warranty, typically one year on the pump. Sleeves and tubing are supplies. While you rent the unit we maintain, repair or replace it at no charge and no repair cost to you.

Returns, pickup and exchanges

Call (770) 991-4417 when your physician discontinues it and we will schedule pickup or send a prepaid return label at no charge.

Using this equipment safely

- Wear the device for the number of hours per day your physician ordered. It only protects you while it is on and running.
- Sleeves should be snug but not tight — you should be able to slide two fingers under the edge.
- Do not use the device on a leg with a known or suspected existing blood clot, an open or infected wound, a skin graft, or severe peripheral arterial disease, unless your physician specifically approved it.
- Seek medical care immediately for new calf pain or tenderness, warmth, redness, or swelling in one leg — and call 911 for sudden shortness of breath or chest pain.
- Check your skin each time you remove the sleeves, especially if you have diabetes or neuropathy.
- Keep tubing untangled and clear of walkways so you do not trip when you get up.

Questions or problems

Call (770) 991-4417. Our office is open Monday–Friday 9:00 AM–5:00 PM Eastern, and a technician is available 24 hours a day for urgent equipment problems. Call 911 for a life-threatening emergency, and your physician for medical questions. Your rights, our complaint process, and how to report a concern to The Joint Commission, Medicare or the State of Georgia are in the Patient Care & Compliance Information Packet provided with this insert and at www.rangeofmotion.us.
